

## THINLINE REINS

In looking for new set of reins, I ran across Thinline reins and decided to try them.

They are long enough so that my horse can drink and not pull me into the river, yet short enough so that there is not an excess of rein to hold on to.

They are web lined and covered in the Thinline material making them very flexible and supple. The ends are European leather and very soft.

They are comfortable and easy to hold on to, non slip yet not sticky as some rubber reins can be.

I have used these in cold weather and they were not stiff at all, very easy to hold in cold and rainy weather.

So, if you are looking for an exceptional pair of reins, go to [www.thinline.com](http://www.thinline.com) and look at the reins.
